## DETAILED ACTION

### *Claim Rejections - 35 USC § 102*

1. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(e) the invention was described in (1) an application for patent, published under section 122(b), by another filed in the United States before the invention by the applicant for patent or (2) a patent granted on an application for patent by another filed in the United States before the invention by the applicant for patent, except that an international application filed under the treaty defined in section 351(a) shall have the effects for purposes of this subsection of an application filed in the United States only if the international application designated the United States and was published under Article 21(2) of such treaty in the English language.

2. Claims 1, 5, 6, 7, 11, 12, 23, 25 & 26 are rejected under 35 U.S.C. 102(e) as being anticipated by USP 6,720,464 to Ohno et al. (herein referred to as "Ohno").

The applied reference has a common inventor with the instant application. Based upon the earlier effective U.S. filing date of the reference, it constitutes prior art under 35 U.S.C. 102(e). This rejection under 35 U.S.C. 102(e) might be overcome either by a showing under 37 CFR 1.132 that any invention disclosed but not claimed in the reference was derived from the inventor of this application and is thus not the invention "by another," or by an appropriate showing under 37 CFR 1.131.

Ohno teaches a continuous method of detecting the concentration of fluorine gas comprising continuously introducing a very slight amount of outlet gas into the continuously flowing solution containing a metal iodide to produce iodine, measuring the transmittance of visible light in a specific wavelength region through the solution, thereby continuously quantitating

the iodine produced, and calculating the concentration of fluorine used. Infrared spectrometry may be used. See col. 7, lines 32-46.

3. Applicant cannot rely upon the foreign priority papers to overcome this rejection because a translation of said papers has not been made of record in accordance with 37 CFR 1.55. See MPEP § 201.15.

*Claim Rejections - 35 USC § 103*

4. Claims 2, 8 & 24 are rejected under 35 U.S.C. 103(a) as being unpatentable over Ohno as applied to claims 1, 5, 6, 7, 11, 12, 23 & 25 above, and further in view of USP 6,706,089 to Landau.

Ohno as applied above fails to teach the presence of starch in the metal iodide containing solution. Landau teaches the use of starch in conjunction with the detection of fluorine with metal iodide. A starch-potassium iodide indicator is formed that facilitates the detection of the fluorine. See col. 4, lines 8-11. Thus, given the teaching of Landau that starch-iodide indicator yield a colorimetric indication of fluorine, it would have been obvious to one of ordinary skill in the art to modify Ohno to additionally include a colorimetric detection method that would aid in visibility of fluorine detection and would also aid in quantitative measurement of visible light transmittance based on the development of the blue color product.

5. Claims 3, 4, 9, 10 rejected under 35 U.S.C. 103(a) as being unpatentable over Ohno. Ohno differs from the instantly claimed invention in that it does not disclose the specific wavelengths at which the halogen is measured. However, since Ohno is measuring the same halogen, namely fluorine, one of ordinary skill would expect that the wavelength range would be

Art Unit: 1743

similar. Thus, it would have been obvious to one of ordinary skill in the art to measure the wavelength at the ranges instantly claimed with the expectation of being able to detect fluorine concentration.
